

Executive KPI Framework

Comprehensive Operational & Financial Metrics Guide for Customer Analytics

Dataset Analyzed: Telco Customer Churn Scope: 7,043 Customer Accounts

Document Version: 1.0

BASELINE EXECUTIVE DASHBOARD (DATASET SNAPSHOT)

TOTAL CUSTOMERS 7,043 Total active & churned portfolio	ACTIVE CUSTOMERS 5,174 73.46% active retention rate	CHURN CUSTOMERS 1,869 26.54% overall churn rate
MONTHLY REVENUE (MRR) \$456,116.60 \$316,985.75 active MRR	ARPU \$64.76 Avg monthly charge / account	AVERAGE TENURE 32.4 mos Active: 37.6m Churned: 18.0m

Key Operational Insight:

Churned customers exhibit an average tenure of **18.0 months** compared to **37.6 months** for active customers. The primary revenue drop-off occurs during the first 12–24 months. Early retention interventions represent the highest leverage opportunity to maximize Customer Lifetime Value (CLV).

DETAILED KPI DEFINITIONS & FORMULAS

1. Total Customers

Volume Metric

BUSINESS FORMULA

Total Customers = Count(Unique Customer IDs)

Definition: The aggregate number of unique customer accounts recorded in the system, encompassing active and historical churned accounts.

Business Value: Establishes total market penetration, addressable account volume, and baseline sizing for operational scaling.

Dataset Value: 7,043 Accounts

2. Active Customers

Health Metric

BUSINESS FORMULA

Active Customers = Total Customers – Churn Customers

Definition: The count of currently active subscription accounts that generate revenue and have not canceled service as of the audit date.

Business Value: Directly reflects operational capacity, recurring revenue base, and ongoing subscriber health.

Dataset Value: 5,174 Accounts (73.46% of Total)

3. Churn Customers

Attrition Metric

BUSINESS FORMULA

Churn Customers = Count(Customer IDs where Churn = 'Yes')

- Definition:** The total volume of customer accounts that discontinued or terminated their subscription during the tracking window.
- Business Value:** Quantifies total lost subscriber volume to guide proactive retention, win-back targeting, and defect prevention.
- Dataset Value:** 1,869 Accounts (26.54% of Total)

4. Churn Rate

Efficiency Metric

BUSINESS FORMULA

Churn Rate = (Churn Customers / Total Customers) × 100

- Definition:** The percentage of total accounts lost over a designated period relative to the total base size.
- Business Value:** Measures customer dissatisfaction and product-market fit leakage. High churn rates erode Customer Acquisition Cost (CAC) efficiency.
- Dataset Value:** 26.54%

5. Retention Rate

Loyalty Metric

BUSINESS FORMULA

Retention Rate = (Active Customers / Total Customers) × 100 = 100% – Churn Rate

- Definition:** The proportion of subscribers who maintain active accounts across a given measurement period.
- Business Value:** Primary driver of compounding top-line growth. Small gains in retention dramatically expand net margins over time.
- Dataset Value:** 73.46%

6. Monthly Revenue (MRR)

Financial Metric

BUSINESS FORMULA

Monthly Recurring Revenue (MRR) = Σ (MonthlyCharges_i for active accounts)

- Definition:** The total standardized monthly recurring revenue generated from active customer subscriptions.
- Business Value:** The fundamental top-line health metric for subscription businesses, enabling precise cash flow and valuation forecasting.
- Dataset Value:** \$456,116.60 (Total Base Run-Rate) | \$316,985.75 (Active Base MRR)

7. Average Revenue Per User (ARPU)

Unit Economics

BUSINESS FORMULA

ARPU = Monthly Revenue / Total Customers = Σ (MonthlyCharges) / N

- Definition:** The average recurring monthly revenue generated per customer account across the portfolio.
- Business Value:** Evaluates pricing tier execution, upselling success, and cross-selling monetization effectiveness.
- Dataset Value:** \$64.76 / month (Overall) | \$61.27 / month (Active Accounts)

8. Average Tenure

Lifespan Metric

BUSINESS FORMULA

Average Tenure = $\Sigma (Tenure_i \text{ in months}) / \text{Total Accounts}$

Definition: The average duration in months that customer accounts stay active prior to cancellation or up to the audit date.

Business Value: Directly dictates total customer longevity and lifetime account capitalization.

Dataset Value: 32.4 Months (Overall) | 37.6 Mos (Active) | 18.0 Mos (Churned)

9. Customer Lifetime Value (CLV / LTV)

Valuation Metric

BUSINESS FORMULA

CLV = *ARPU* × *Average Tenure*

SaaS Model: CLV = $(ARPU \times \text{Gross Margin \%}) / \text{Monthly Churn Rate}$

Definition: The cumulative financial contribution expected from a single account over its entire lifespan.

Business Value: Determines acquisition payback caps (CAC ceiling). High CLV empowers aggressive user acquisition investment.

Dataset Value: \$2,096.41 (ARPU × Tenure) | \$2,279.73 (Historical Actual Total Charges Mean)

KPI OPERATIONAL REFERENCE MATRIX

KPI NAME	CATEGORY	DATASET VALUE	INDUSTRY TARGET	STRATEGIC FOCUS AREA
Total Customers	Volume	7,043	Continuous Growth	Acquisition & Conversion Optimization
Active Customers	Health	5,174 (73.5%)	> 85.0%	Onboarding Quality & Account Management
Churn Customers	Attrition	1,869 (26.5%)	< 15.0%	Proactive Early Intervention & Support
Churn Rate	Efficiency	26.54%	< 5.0% - 10.0%	Contract incentives & Quality SLAs
Retention Rate	Loyalty	73.46%	> 90.0%	Product Engagement & VIP Loyalty Programs
Monthly Revenue	Financial	\$456,116.60	MoM Growth > 3%	Pricing Optimization & Add-on Services
ARPU	Unit Economics	\$64.76	Upward Expansion	Cross-selling, Upselling & Tier Migration
Average Tenure	Lifespan	32.4 months	> 36.0 months	Multi-Year Contracts & Onboarding Lifecycle
Customer Lifetime Value	Valuation	\$2,096.41	> 3x CAC	Retention Expansion & LTV/CAC Optimization
