

Strategic Business Recommendations: Telecom Customer Retention & AI

Professional Consulting Report & Implementation Roadmap

1. EXECUTIVE SUMMARY

An exhaustive analysis of our telecom subscriber base reveals a critical **26.5% overall churn rate** (\$456.2K monthly revenue leakage), driven primarily by month-to-month contracts, fiber optic pricing friction, and manual payment channels (electronic check). This consulting report outlines an integrated strategic roadmap combining immediate quick wins, customer retention programs, revenue optimization, and advanced AI prediction models to protect recurring cash flow and maximize Customer Lifetime Value (LTV).

2. QUICK WINS (0 TO 30 DAYS)

Electronic Check Migration Campaign

- Offer a \$10 one-time bill credit for customers switching from electronic check to automatic credit card/bank transfer.
- Eliminate billing processing friction points within the first 14 days.

Month-to-Month Contract Incentives

- Target month-to-month subscribers at month 2-3 with discounted annual contract upgrades.
- Provide free premium add-ons (e.g., security or streaming) upon contract commitment.

3. MEDIUM-TERM STRATEGIES (30 TO 90 DAYS)

- **Fiber Optic Onboarding Optimization:** Address support ticket escalations and perceived value gaps for fiber optic subscribers through dedicated concierge onboarding.
- **Senior Citizen Support Tiers:** Deploy simplified billing statements and specialized customer success training for senior demographics.

- **Proactive Support Interventions:** Automatically flag accounts registering 2+ support tickets within a 14-day window for immediate manager callback.

4. LONG-TERM STRATEGIES (90+ DAYS)

- **Tiered Loyalty & Rewards Ecosystem:** Establish tenure-based milestone rewards (discounts at 12, 24, and 36 months) to flatten the steep early-tenure churn curve.
- **Product Bundle Restructuring:** Design flexible multi-play bundles (Internet + Streaming + Mobile) that increase switching costs and deepen product stickiness.

5. CUSTOMER RETENTION PROGRAMS

VIP High-Value Retention

- Establish a dedicated VIP retention desk for accounts generating above-average monthly charges (\$75+).
- Proactive outreach 60 days prior to contract expiration.

Win-Back Automated Flows

- Trigger automated win-back email sequences offering installation fee waivers and upgraded speeds to recently churned accounts.

6. REVENUE IMPROVEMENT IDEAS

- **ARPU Expansion via Upselling:** Recommend higher bandwidth tiers to high-usage DSL customers before they migrate to competitors.
- **Dynamic Pricing Protection:** Introduce tenure-based loyalty rebates that reward long-standing subscribers while maintaining premium pricing for new acquisitions.

7. AI RECOMMENDATIONS

- **Deploy Real-Time Churn Scoring:** Implement an XGBoost machine learning model scoring customer accounts daily based on usage drop-offs and support interactions.
- **Automated CRM Playbooks:** Integrate AI risk probabilities directly into Salesforce/HubSpot to trigger automated retention incentives when churn probability exceeds 75%.
